

## Case Study

# Springburn Childcare

## Artificial Grass Playground

The opportunity for children to enjoy many aspects of the outside environment is just one of the numerous reasons why Springburn Childcare is such a popular choice for parents in this beautiful part of West Berkshire. Among the features there are building camps, rope swings, log climbing areas and a natural sensory garden.

With highly experienced teams providing comprehensive care services for babies, toddlers and pre-school children, this is an exceptionally well-resourced centre.

The expertise of Slatter Play Technicians was called on to refurbish the artificial grass playground areas where the existing surfacing needed renewal and an upgrade. They selected Finesse artificial grass as the ideal new play surface.

This is a superior quality landscape grade of artificial grass that is hard wearing, comfortable and great looking. It features a two-tone green 26mm artificial pile mixed with a small amount of brown fibre to produce the visual appearance of a well-maintained natural lawn.

Where additional impact absorption was required – for instance around and under play equipment - S&C Slatter installed a special shock pad layer under the artificial grass.

Client Springburn Childcare

Facility Artificial grass playground. 294m<sup>2</sup>.

Finesse tufted artificial grass.

VHAF underlay shock pad.

Full installation works including removal and disposal of existing surfacing, regrading of stone foundation, supply lay and fix of new shock pad and artificial grass.

On-site management of working areas to minimise interruption of normal centre activities.

Tidying and clearance of all working areas.

“ The children love it and the gardens look like new again. Thank you to the men who worked on our project, they were brilliant - polite, courteous and professional at all times. We will do our best to recommend you to all!”
